Lab 17: Resume, and say exactly which file changed

Topic 1: Agentic Architecture & Orchestration · Task 1.7: Manage session state, resumption, and forking
Runs on Simulator 4: Developer Productivity with Claude · Self-practice
Source: Built from exam guide task statement 1.7 (no practice question covers this angle)

The question

Yesterday's session analysed the billing repo. Overnight, a teammate changed invoice.py. You want to carry on today. How do you continue?

A. Resume silently and let the agent trust stale tool results.

B. Name the changed file, or start fresh with a structured summary.

Simulate it live

```
# In the browser: open Simulator 4, then Lab 17
cd labs
uv run serve.py

# In Claude Code, from the labs folder
/lab 17

# In a terminal, from simulators/simulator-4-developer-productivity/
uv run explorer.py --case UC-D4
```

What you should see

Same session id, at most two Reads, no Grep, no subagent.

Same session id as explore; at most two Reads, no Grep, no subagent.

Open `simulators/simulator-4-developer-productivity/evidence/` and find it yourself.

The answer

B. Name the changed file, or start fresh with a structured summary.

Check yourself

- session id equals the explore session
- no Grep and no Agent call
- Read count <= 2

Now change one thing

Edit the prompt_template in this lab's file under cases/, rerun with --case, and check tool_log.jsonl for what changed.
