Lab 28: A /review command the whole team gets through git

Topic 3: Claude Code Configuration & Workflows · Task 3.2: Create and configure custom slash commands and skills

Runs on Simulator 2: Code Generation with Claude Code · Self-practice

Source: Official exam guide, sample question 4

The question

You want to create a custom /review slash command that runs your team's standard code review checklist. This command should be available to every developer when they clone or pull the repository. Where should you create this command file?

A. In the .claude/commands/ directory in the project repository

B. In ~/.claude/commands/ in each developer's home directory

C. In the CLAUDE.md file at the project root

D. In a .claude/config.json file with a commands array

Simulate it live

```
# In the browser: open Simulator 2, then Lab 28
cd labs
uv run serve.py

# In Claude Code, from the labs folder
/lab 28

# In a terminal, from simulators/simulator-2-code-generation/
uv run simulator.py 2
```

What you should see

/review main finds the removed orders:read check and ends with a VERDICT line.

Open `simulators/simulator-2-code-generation/evidence/` and find it yourself.

The answer

A. Commit it to .claude/commands/.

Project-scoped custom slash commands should be stored in the .claude/commands/ directory within the repository. These commands are version-controlled and automatically available to all developers when they clone or pull the repo. Option B (~/.claude/commands/) is for personal commands that aren't shared via version control. Option C (CLAUDE.md) is for project instructions and context, not command definitions. Option D describes a configuration mechanism that doesn't exist in Claude Code.

Now change one thing

Set LAB_MODEL=claude-sonnet-5-5, rerun, and compare the result and the cost line in evidence/.
