Lab 58: Crash recovery from a manifest

Topic 5: Context Management & Reliability · Task 5.4: Manage context effectively in large codebase exploration

Runs on Simulator 4: Developer Productivity with Claude · Self-practice

Source: Built from exam guide task statement 5.4 (no practice question covers this angle)

The question

The agent crashed halfway through a long investigation. How does the next session pick up without starting again?

A. Export state to a manifest and load it on resume.

B. Start exploring again from nothing.

Simulate it live

```
# In the browser: open Simulator 4, then Lab 58
cd labs
uv run serve.py

# In Claude Code, from the labs folder
/lab 58

# In a terminal, from simulators/simulator-4-developer-productivity/
uv run explorer.py --case UC-D5
```

What you should see

Fresh session id, no Grep, no subagent, and the tests pass.

Fresh session id; no Grep, no subagent; tests pass.

Open `simulators/simulator-4-developer-productivity/evidence/` and find it yourself.

The answer

A. Export state to a manifest and load it on resume.

Check yourself

- new session id
- no Grep and no Agent call
- pytest exits 0

Now change one thing

Edit the prompt_template in this lab's file under cases/, rerun with --case, and check tool_log.jsonl for what changed.
